Profile

I am a dynamic and driven individual eager to carve out a career in the ever-evolving field of Software Development. With a penchant for adaptability and a vibrant personality, I thrive in diverse work environments. Motivated and collaborative, I excel both independently and as part of a team. Continuously expanding my knowledge base, I actively pursue mastery of new technologies and subjects.

With five years of hands-on experience in web development, I bring a wealth of expertise to any project or team. I have successfully developed over 50 websites and web applications, including more than 30 freelance projects. This extensive experience has honed my skills and solidified my ability to deliver high-quality solutions in a variety of contexts.

I also have extensive experience in integrating various payment systems, SMS services, and other integrations. My payment integration expertise includes working with KBZPay, Wave Money, AYA Pay, and others via Dinger as well as direct integrations. For the Chinese market, I have experience with WeChat and Alipay, and for the Japanese market, I have experience with FinCode. Additionally, while I have limited experience in live streaming and web sockets, I am eager to expand my expertise in these areas to meet the demands of modern software development.
